

● PROBLEM

Digital artists lose control before they earn revenue.

Independent creators can publish beautiful work, but the current internet sales path exposes them to theft, high platform cuts, weak auction access, and blocked buyer relationships.

Pain point summary

- Artists upload. The internet can copy, reuse, and redistribute previews without permission.
- Traditional marketplaces can take 30-50% cuts, leaving creators with reduced earnings.
- Live auctions are rarely accessible to indie artists without heavy platform support.
- Creator-to-collector trust is weakened when every conversation goes through a middleman.

@MetArt protected preview

Current path leakage

- 1 Upload**
Artist publishes high-res preview
- 2 Copy risk**
Preview can be copied before sale
- 3 Platform cut**
30-50% commissions reduce income
- 4 No direct trust**
Middleman owns the buyer relationship

MetArt starts by closing this gap: protection, selling, auctions, chat, and payment in one creator-owned journey.

MetArt turns upload into a protected selling journey.

The product combines AI-assisted listing, anti-piracy watermarking, realtime auctions, direct DMs, and payments so artists can move from creation to revenue without losing control.

What MetArt fixes

- **AI co-pilot** Faster professional listings
- **Auto-watermark** Anti-piracy preview pipeline
- **Realtime auctions** Accessible bidding for indie art
- **Direct DMs** Creator and collector relationship

One-line pitch: MetArt helps independent artists protect, sell, auction and monetize digital artwork directly with collectors.

No middleman ownership of the relationship

The stack is built around secure media, realtime bidding, and AI listing support.

MetArt is a MERN product architecture with AI vision, image processing, protected storage, WebSocket interactions, and payment rails aligned to the creator revenue journey.

Tech snapshot

React + Redux
Node + Express
MongoDB + Mongoose
OpenAI Vision / GPT-4o
Sharp + Cloudinary
Socket.IO + JWT
Stripe + Khalti

Why this stack matters

Listing speed

AI turns an image into polished catalog copy, tags, pricing and watermark placement.

Asset protection

Sharp overlays the watermark before secure Cloudinary upload.

Direct monetization

Auctions, DMs and payments connect collectors to artists without extra friction.

ICP: indie creators and collectors who need trust without a middleman.

MetArt's beachhead audience is independent digital artists who already share work online but need protection, better presentation, direct buyer access, and practical selling tools.

Target categories

Primary ICP

Independent Artists

Digital artists, painters, illustrators and photographers who need AI help to list work professionally, protect previews, run auctions and get paid directly.

Core need: control + monetization

Secondary ICP

Digital Collectors

Collectors and buyers who want unique artwork, transparent creator interaction, real-time auctions and a smoother checkout journey.

Core need: authenticity + access

Go-to-market wedge

- 1 Start**
Artists who post on social platforms but lack a selling workflow.
- 2 Convert**
Use AI upload + watermarking as the reason to publish on MetArt.
- 3 Expand**
Add live auctions, DMs and checkout to turn followers into collectors.

Phase 1 outcome: MVP story is pitch-ready once the deck is paired with a working demo of upload, protection, auction, chat and checkout.

MetArt = protect + sell +
auction + chat
